## Executive Summary

The coordination of LCY S16 season has seen very little change within the morning/evening peaks. Availability due to runway constraints remains very scarce with the rolling 60 minute runway constraints of 19 Arrivals or 19 Departures per 60min period remaining the main obstacle to adding new services into the morning / evening peak periods.

The step change from 70 to 76 movements per 120min period at 06:30z has created some complex scheduling scenarios prior to 06:30z where there are two additional overnight services (Alitalia and Flybe) for S16, combined with a changing profile of BA Cityflyer's early morning departures.

Initial demand for stand capacity exceeded the number of stands available during the 11:00 - 13:55z time period and a number of reschedules have been made to reduce demand and to make the schedule fit within the declared stand constraints.

## Runway Constraints

- The majority of adjustments due to runway constraints are found within morning/evening peaks.
- There are only a small number of runway problems during off peak periods (adjustments <15mins).

## Terminal Constraints

No Terminal Constraint issues.

## Stand Constraints

- Nearly all of the scheduled adjustments due to stand constraints occur during the 1100-1355z period.

## Night Constraints

No Night Constraint issues.

## Other Constraints

No Other Constraint issues.

## Arr/Dep Turnaround Feasibility

- There are outstanding requests for non standard ground times (>30mins) within the morning peak.
- There are outstanding requests for non standard ground times (>30mins) within the evening peak.
